## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. Claims 1-35 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Claims 1, 10, 23, 32, and 34 are directed to a method for detecting and decoding data comprising detecting a size of said received set of data signals to use as a factor for decoding said data. However, the disclosure does not provide any enablement as to how and which component or element detects a size of received set of data signals to use as a factor for decoding said data.

### ***Response to Arguments***

2. Applicant's arguments filed 2/27/07 have been fully considered but they are not persuasive.

The applicant argues on page 14, third paragraph, that claims 1-35 do indeed comply with enablement requirements under 35 U.S.C 112. The applicant argues that the steps: a serial to parallel converter and the data formatter receives data and converts to a serial stream into parallel format, the word clock signal on the line 217 then increments the word count number in the counter 240, a change in the word count number sent to the memory element 330 prompts the next set of possible matching frame of data is extracted from memory, utilizing the comparators 320-326, the host interface 245 can predetermine the composition of the data packets, which should

match any data packets that are addresses to that particular host, may be used by the comparators 260 to determine if the respect data set match. These step determine whether the value of signal indicating a proper match has been found and, if so, then the byte portion of the data latched.

The applicant argues further on page 15, second paragraph, that the mask bit is used by the mask circuitry 270 to facilitate selectively of clocking-in of the data comparison results into registers 285. Therefore, the applicant concludes that the size of the data that is transmitted may be used to perform the decoding called for by claims of the presentation. The examiner disagrees. The disclosure does not provide any enablement as to how and which component or element explicitly detects a size of received set of signals to use as a factor for decoding said data.

### ***Conclusion***

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
